What is the Clinical Patient Management System?

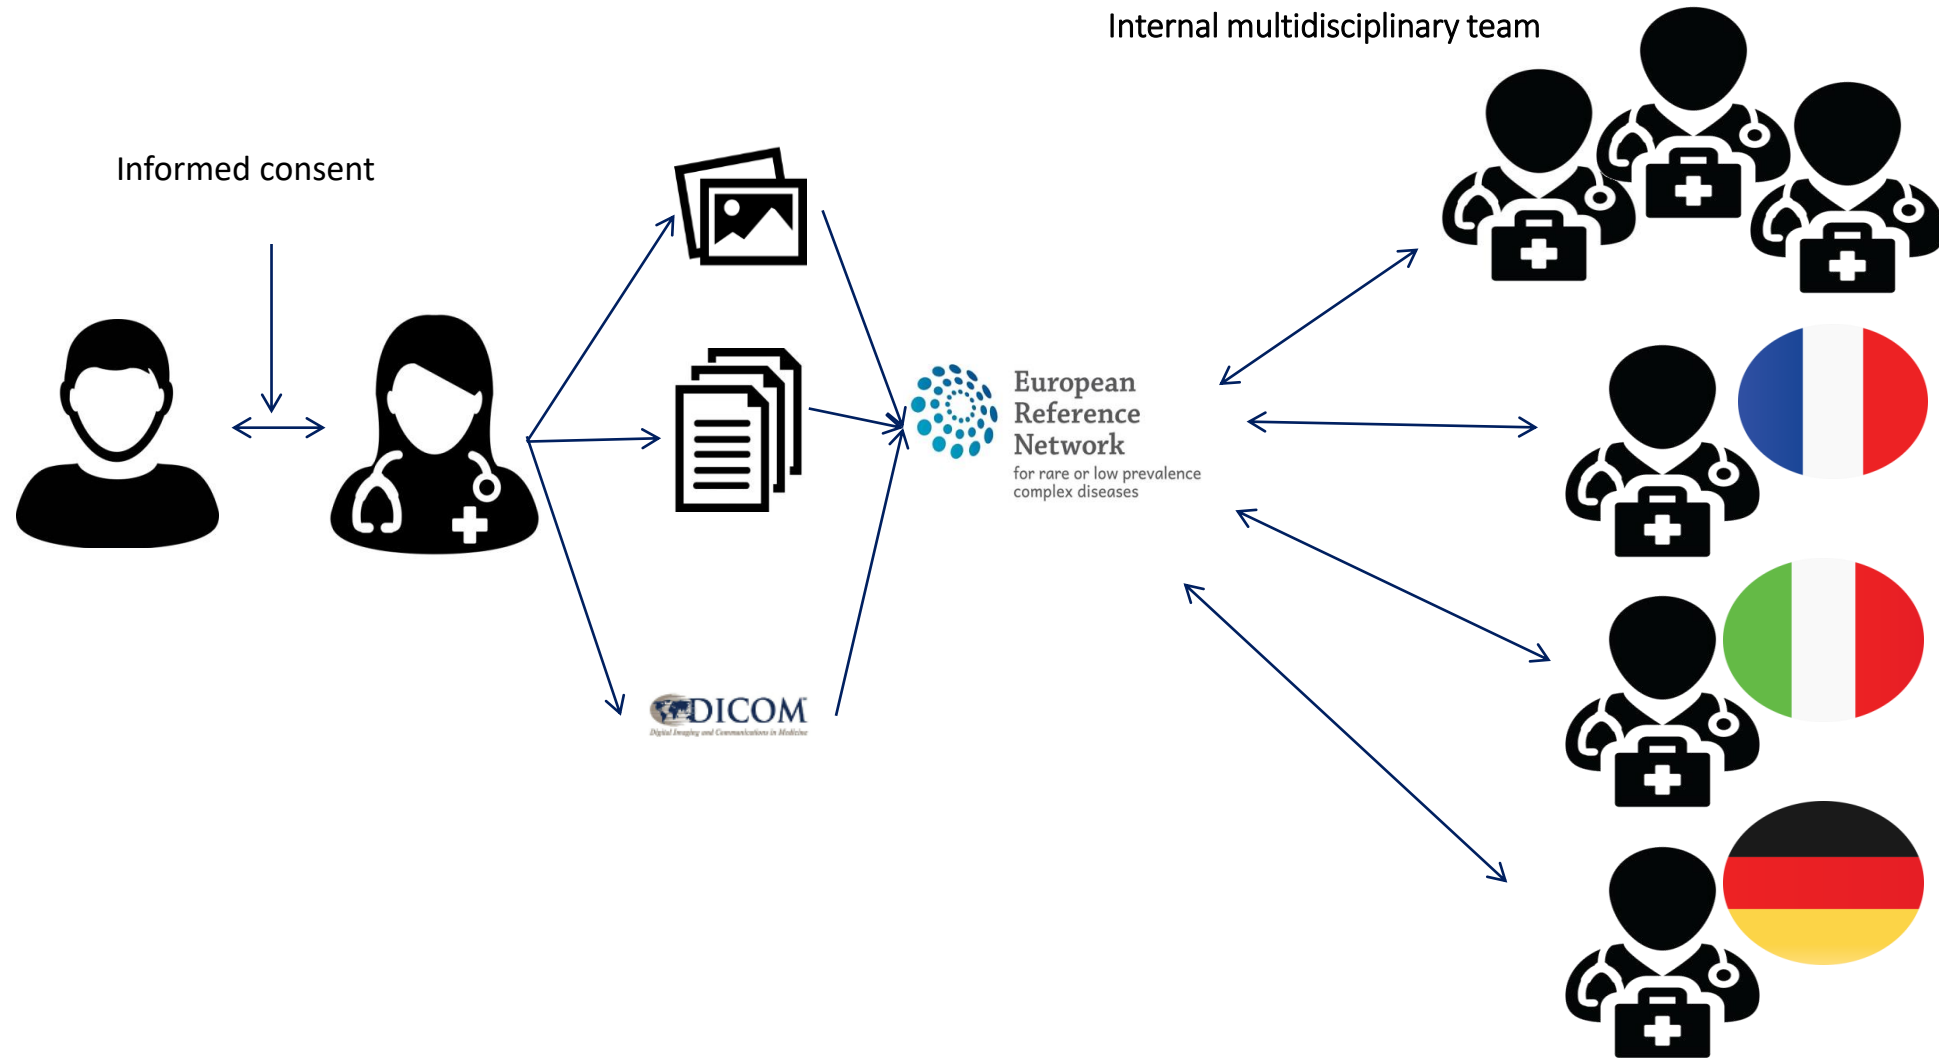

- 
 The Clinical Patient Management System (CPMS) is a **secure** web-based application to support European Reference Networks (ERNs) in the **diagnosis and treatment** of rare or low prevalence complex diseases or conditions **across national borders**.

Added values for the CPMS

- The CPMS provides a crucial tool for rare disease patients enabling healthcare professionals across Europe to **discuss clinical cases** in a safe environment.
- CPMS is a revolutionising tool to provide capacity for **cross-border virtual consultations**, and **research activities**.
- Bringing together highly specialised healthcare providers in complex, rare or low prevalence diseases the CPMS can contribute to the **diagnose, treatment and follow-up of rare diseases patients**.

National Hub

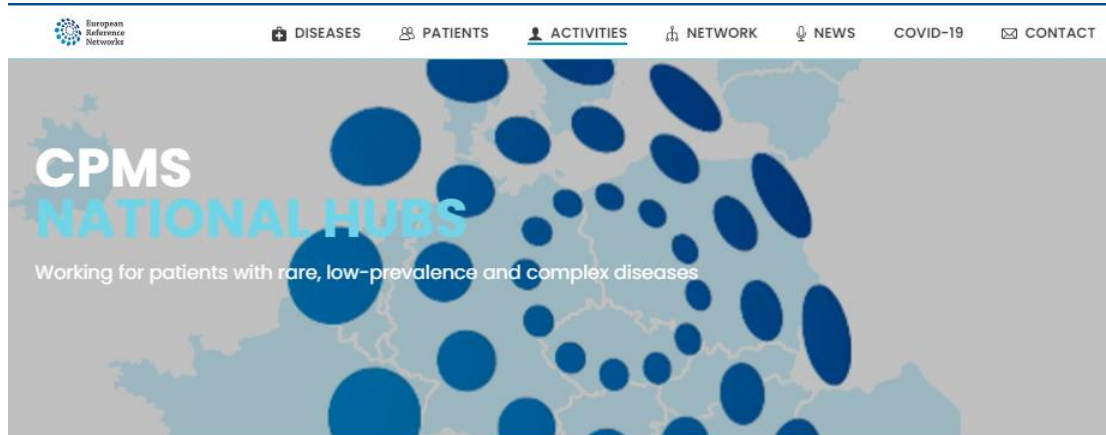

ERN ReCONNET website and ERN ReCONNET Helpdesk

Support the central Helpdesk in the management of the CPMS request

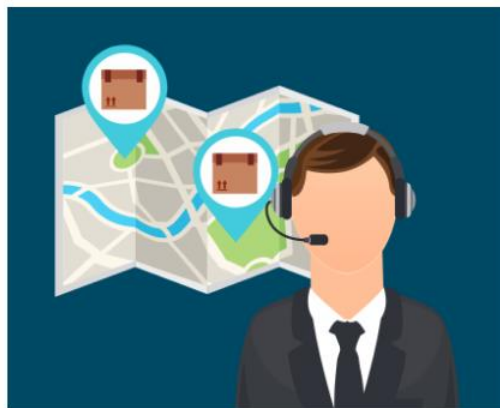

Promotion and dissemination

The National Hub

- enables a wider diffusion of the CPMS potentialities and of the CPMS usage, making the CPMS service available for a larger number of patients, even for those living in disadvantaged areas, far from reference centers;
- communicates in the local language and helps in overcoming language barriers;
- ensures that the CPMS is presented in national/local conferences, meetings and web-conferences (at least two times a year);
- creates a leaflet on the CPMS in national language.

Role of National Hubs

Contact point

The National Hub

- serves as national contact point to support the usage and the dissemination of the CPMS at national/local level
- serves as national reference contact for specialists, general practitioners and other healthcare professionals in each country in order to provide information on the functioning of the platform
- contributes to connecting even the more remoter healthcare providers and patients to highly specialised services of the ERN ReCONNET
